

T- Lube

A new revolutionary development for the asphalt paving industry.

T-Lube, developed with 100% American grown soybeans, prevents asphalt from bonding to rubber and polyurethane surfaces. T-Lube is a drop in solution for your current working environment that solves the frustrating problem of asphalt pick up on cold tires or conveyor belts. Unlike other products, T-Lube does not degrade rubber tires or polyurethane surfaces. It is safe for workers, 100% biodegradable, does not contribute to global warming and guaranteed to leave the asphalt where it was intended to stay. T-Lube is the solution for any paving job!

APPLICATION:

Use in concentrated form to prevent asphalt from bonding to rubber and polyurethane surfaces. When rubber tires on compactors are cool, spray tire surface with BEAN-e-doo T-Lube. As tire warms up T-Lube will evaporate. Reapply as needed. For other uses, spray light coat of T-Lube on the surface to protect from asphalt bonding. For clean up, spray with water to rinse surface of all residues.

Flash Point: Above 500

• pH Level: 6.65 pH of 1/10 solution in soft water.

Vapor Pressure: NA

Odor: Yellow oily liquid.

• Conditions to avoid: Strong oxidizing agents, rags soaked with other solvents or chemicals.

• Health Hazards: None known

Packaged: Five Gallon, 55 Gallon Drum

Common Uses

Prevent asphalt bonding

- Tires**
- Tracks**
- Conveyor belts**
- Hoses**
- Rubber surfaces**
