

Atomizing Line Painting

Unlike airless stripers, our airspray machines do not require you to replace costly tips after every 500 gallons of paint. The heavy duty components on our machines ensure you a trouble free painting season, with only a small number of parts having to be replaced once a year.

There's no comparison to our model HRL 1 for painting parking lots, athletic fields, industrial lanes, and crosswalks.

Our reliable diaphragm operated gun (with stainless steel components) in conjunction with air curtains give you straight edges every time you paint. Our perfectly balanced frame takes the weight off the operator and is over engineered to give you a heavy duty striper that will endure for years of rugged Work.

When you compare the features of our machine to others on the market; Value for your money HRL-1 is number 1.

Key Features

Heavy duty frame, each individually hand-made for a long lasting life. Designed to take the weight off of the operator, and to ensure years of straight tracking.
